Reading Comprehension.

Read the passage and answer the questions as wanted.

4 Organic food is very popular these days. It can also be very expensive. Some organic food costs twice as much as non-organic food. Parents of young children, and even some pet owners, will pay high prices for organic food if they think it's healthier. But many others think organic food is just a waste of money.

There is one main difference between organic and non-organic food. Organic farms do not use agricultural chemicals such as pesticides that stop insects from damaging crops. In many countries foods that claim to be organic must have special labels that guarantee they're grown organically. Most people agree that naturally grown food tastes better. Is tastier food worth the extra money? That's a matter of opinion. Whether organic food is healthier or not is still not clear, so more research is needed. However, consumers of organic food often say "better safe than sorry" when it comes to what we eat.

A) True or False.

- 50) Organic food is much cheaper than non-organic food.
 51) The majority of people believe that organic food is much tastier.
 52) There is no need for further research about organic food.
 53) Insects can destroy crops.
